Sprint 2
Contribution Log

Name: Elyes Jallouli
GitHub Username: ElyesJallouli
Course: SOEN 341 – Fall 2026
Project: CareerConnect

1. Create and View Job Postings

Issue: https://github.com/Sprytte/CareerConnect/issues/34
Pull Request: https://github.com/Sprytte/CareerConnect/pull/76
Commit: https://github.com/Sprytte/CareerConnect/commit/1db62f7

Activities:
- Worked on the implementation of job posting creation and viewing functionalities.
- Developed and updated frontend components for recruiters to create job postings.
- Integrated frontend functionality with the Spring Boot backend.
- Worked on backend service and controller logic for job posting management.
- Tested the creation and retrieval of job postings.
- Addressed integration issues during development.

Time spent: approx. 6 to 9 hours

2. Edit and Manage Job Postings

Issue: https://github.com/Sprytte/CareerConnect/issues/36
Pull Request: https://github.com/Sprytte/CareerConnect/pull/77
Commit: https://github.com/Sprytte/CareerConnect/commit/06a4b72

Activities:
- Implemented functionality allowing recruiters to edit existing job postings.
- Worked on job posting deletion and management.
- Updated frontend forms and job posting pages.
- Updated backend service and controller methods.
- Integrated frontend operations with backend endpoints.
- Resolved Git merge conflicts caused by changes to the main branch.
- Verified successful Java backend compilation.

Time spent: approx. 7 to 8 hours

3. Allow Users to Apply for Jobs

Issue: https://github.com/Sprytte/CareerConnect/issues/42
Pull Request: https://github.com/Sprytte/CareerConnect/pull/78
Commit: https://github.com/Sprytte/CareerConnect/commit/6ccc947

Activities:
- Worked on the frontend job application functionality.
- Implemented user interactions for submitting job applications.
- Integrated job application features with existing job search components.
- Worked on navigation between job listings and application pages.
- Connected application-related frontend components with backend functionality.
- Tested and adjusted application interactions during development.

Time spent: approx. 9 to 11 hours

4. Integration, Testing and GitHub Collaboration

Activities:
- Used Git branches and pull requests to organize feature development.
- Integrated changes with other team members' contributions.
- Investigated and resolved merge conflicts.
- Reviewed frontend and backend compatibility.
- Used Gradle to verify backend compilation.
- Investigated a frontend TypeScript build issue unrelated to the assigned job posting features.
- Maintained commit history and pull request references for contribution tracking.

Time spent: approx. 4 hours

Total Time Spent on Sprint 2: between 25 to 30 hours
